RAVI PRAKASH RAJJAK

Engineering Lead | Fintech Platform/Digital Entertainment | Android & Backend Systems

Dubai, UAE | +971 585512173/+91 98702 91606 | ravirajjak@gmail.com | linkedin.com/in/ravi-rajak-8bb078a4

PROFESSIONAL SUMMARY

Engineering Lead with 10+ years of experience building high-scale fintech, payments, and OTT platforms serving millions of users. Deep expertise in Android (Kotlin, MVVM, Jetpack Compose, Clean Architecture) and backend systems (Spring Boot, FastAPI, PostgreSQL). Proven track record of leading cross-functional teams of 10+ engineers, owning end-to-end delivery pipelines, and architecting resilient mobile-backend systems with measurable impact on performance, reliability, and user experience.

TECHNICAL SKILLS

Languages: Kotlin, Java, SQL, Kotlin Multiplatform (KMP/KMM), Compose Multiplatform (CMP), Python, C++

Android: Jetpack Compose,Room, WorkManager, Android SDK, AES/RSA Security, Android SDK, Jetpack Compose, LiveData, ViewModel, Room

Architecture: MVVM, Clean Architecture, Multi-module Architecture

Async Programming: Kotlin Coroutines, Flow, Rx Java

Dependency Injection: Hilt

Streaming & OTT: ExoPlayer, DRM, Video Streaming

Core Concepts: Memory Management, Threading, Networking (REST APIs)

Testing: Unit Testing, Debugging, Performance Optimization, SonarQube

Device Support: Multiple Android versions, screen resolutions, device types

Backend: Java/Kotlin Spring Boot, REST APIs, PostgreSQL, MySQL

DevOps & Tools: CI/CD Pipelines, Jenkins, Git, Firebase Crashlytics, JIRA, Agile/Scrum

Third-Party SDKs: Adjust, CleverTap, NotifyVisitors, Google Maps SDK, Plotline

App Security: BugsMirror, Root Detection, SSO, Device Integrity, AES, RSA, Google/Facebook Oauth, SafetyNet, Magisk/Frida-Exploring

Currently Learning: Docker, Kubernetes, Kafka, Generative AI / LLM Integration, Claude Code

OS: Mac OS, Linux, Windows, Television OS Android

Domains: Fintech, Payments, OTT/Streaming, B2B SaaS, Rural Tech, Digital Entertainment

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Emirates NBD- Dubai, UAE 2026-Present

Banking platform serving millions of users across UAE

- Responsible for end-to-end feature development and delivery for the **ENBD X mobile banking application** using **Kotlin and Jetpack Compose**.
- Working within the **Card Services** domain, developing features that enable customers to manage their **credit and debit cards** securely through the mobile application.
- Delivering card-management capabilities such as card details, activation, temporary blocking and unblocking, PIN-related services, transaction controls, and other self-service card operations.
- Collaborating with product owners, business analysts, backend teams, designers, QA engineers, and security teams to translate banking requirements into scalable mobile solutions.
- Building reusable and maintainable UI components using **Jetpack Compose**, following modern Android development practices and clean architecture principles.
- Integrating secure banking APIs and handling application states, validations, errors, and customer journeys across card-service features.
- Participating in requirement analysis, technical design, development, code reviews, testing, defect resolution, and production release activities.

- Ensuring delivered features comply with Emirates NBD's banking security, performance, accessibility, and application-quality standards.
- Supporting feature delivery throughout the complete software development lifecycle, from estimation and implementation to UAT and production deployment.

Senior Engineering Team Lead | PayNearby Technologies 2020 - 2026

Fintech platform serving millions of retailers and rural users across India

- Established **CI/CD pipelines** and observability standards (structured logging, Firebase Crashlytics, telemetry dashboards), maintaining 80 to 90% bug-free delivery across releases.
- Executed and managed CI/CD workflows using **Jenkins**, including:
  - Automating Android SDK version generation
  - Running localization pipelines to extract and translate strings.xml and publish to CDN
  - Deploying backend services across environments
- Designed and owned end-to-end technical strategy for Android APP 2.0 - a Kotlin-first, MVVM + Clean Architecture, multi-module greenfield rewrite aligned with long-term scalability, security (AES/RSA), and performance goals.
- Designed and shipped an Offline-First and Sync Architecture using Room as local source of truth and WorkManager for background orchestration, enabling reliable transaction flows in low-connectivity rural environments.
- Led full-scale codebase modernization: Java to Kotlin to Multi-Module to Clean Architecture, with Jetpack Compose introduced in APP 2.0 to improve UI development velocity and consistency.
- Implemented **AES-based SSO** integration with Bharat Mentors, improving secure access for retailers to onboard and learn platform services.
- **Proposed and led development** of a one-click complaint system, reducing complaint-filing steps by 80% and significantly enhancing user experience for millions of retailers handling failed transactions.
- **Owned and built** a gamified user engagement SDK **(RPL – Retailer Premier League**), inspired by IPL mechanics, enabling daily, weekly, and final rewards; drove increased transaction activity through competitive scoring and reward distribution.
- **Designed and developed** reusable wrapper SDKs across multiple business verticals, significantly reducing development effort and accelerating time-to-market for new feature rollouts.
- **Architected and owned** a backend-driven multilingual SDK using Spring Boot, enabling real-time string delivery without app releases; reduced APK size by ~10 MB by eliminating hardcoded language packs.
- Led Referral and Rewards feature from proposal to production, driving **200 to 400 new retailer onboardings** per month with a simplified mobile-number and PAN onboarding flow for rural and semi-urban users.
- Managed and mentored a 2-8 member Android engineering team - drove architectural governance, deep code reviews, and sprint execution via JIRA-driven agile planning.
- **Integrated WhatsApp communication workflows** using CleverTap and Exotel, enabling scalable customer engagement and notification delivery through partner channels.
- **Architected and implemented** a single-click complaint feature within CRM, capturing transaction metadata (Transaction ID, failure response, response codes, screenshots) to enable instant issue reporting across services.
- **Owned and scaled CRM platform capabilities** by building a unified SDK across multiple projects, enabling seamless complaint registration, tracking, and resolution across business verticals.
- **Engineered automated complaint resolution workflows** within CRM, reducing open support tickets by ~40% through intelligent auto-closure based on transaction status.
- **Owned and delivered** a Scratch Card rewards system, dynamically assigning rewards (cash/coupons) based on transaction value and campaign eligibility, driving user engagement and retention.
- Responsible for **Digital Marketing,** I worked on the Adjust platform, where I was responsible for reports. Whenever any event failed, I used to resolve that issue. My responsibility was to ensure that all events triggered would go to Adjust, and through Adjust, they would reach **Google Ads and Meta Ads**. Giving an overview to the marketing team about the performance of the Ads Campaign.
- Apps shipped: PayNearby Retailer App, Neo Dukaan App, Saathi App, Distributor App

Senior Software Engineer | Netcore Cloud 2020

AI/ML powered marketing automation and customer engagement SaaS platform

- Designed a silent push notification feature using AlarmManager to verify and re-trigger undelivered notifications, improving user engagement by 4% across mobile SDK integrations.
- Built a JavaScript Interface-based WebView bridge enabling seamless two-way communication between the mobile SDK and web platform, adopted by multiple enterprise clients.
- Collaborated closely with clients to troubleshoot SDK integration issues and ensure smooth adoption across diverse Android environments.
- Apps shipped: Netcore Analytics SDK

Senior Software Engineer | Sugarbox Networks 2019 - 2020

Hyperlocal Content Delivery Network and Edge Compute company

- Architected and built an offline-first OTT platform from scratch - streamed content from local edge servers across metros, buses, malls, and cafes with engineered caching and content-delivery pipelines for high-speed, low-latency playback.
- Optimized app performance for **Android phones and TV devices**.
- Owned architecture and delivery of a full-scale restaurant order management system featuring QR-based table ordering, kitchen routing, digital payments, and automated invoicing; significantly reduced service time and order errors while improving operational efficiency and customer experience.
- Apps shipped: Sugarbox App, Feast Plus

Senior Software Engineer | JetSynthesys 2016 - 2019

Digital entertainment, gaming, and sports technology company

- Core developer for 100MB - Sachin Tendulkar's fan app (1 to 6 lakh installs): built custom content feeds, real-time Fan Wall via MQTT sockets, Paytm-integrated rewards, live quiz gaming, and secure video caching from scratch.
- Owned and Delivered Sony Blue Planet OTT (UK market): unified APK for Android phones and TVs with DRM-secured ExoPlayer, encrypted offline downloads, native-layer key protection, and Wowza-backed low-latency streaming - shipped on time for Sony's one-month deadline.
- Owned and Built Pretmode (fashion shopping app) and Channel Fight OTT (European streaming) - end-to-end ownership from architecture to deployment on both projects.
- Implemented a high-performance live streaming solution enabling real-time audience interaction with Sachin Tendulkar.
- Implemented secure storage mechanism **using C++ (NDK + JNI) to protect API keys** and sensitive logic from reverse engineering and APK decompilation
- Apps shipped: 100MB, Blue Planet (Sony Mobiles Europe), Channel Fight, Matas, Leasy, Pretmode, Happie

Software Engineer | Veracitiz Solutions 2015 - 2016

IBM Gold Business Partner specialising in Business Intelligence, Analytics, and AI-powered performance management

- Developed Travel Lite App - an intelligent Android itinerary planner that generates personalized trip plans based on the user's current location and available time, dynamically recommending nearby tourist spots with estimated dwelling times to fit within the given window.
- Engineered smart itinerary scheduling logic that calculated optimal visit sequences, factored in per-spot dwelling time, and ensured the full trip fit within user-defined time constraints without manual input beyond time and location.
- Integrated Google Maps SDK for route visualization, proximity-based spot discovery, and real-time navigation between itinerary stops.
- Implemented Geofencing using Google Location API to automatically mark spots as visited when the user entered a defined radius, simultaneously triggering precise dwelling-time tracking for seamless trip management.
- Built backend services in PHP to manage tourist spot data, user sessions, and itinerary persistence.
- Integrated Google Sign-In and Facebook Login for frictionless OAuth-based authentication, reducing onboarding drop-off.

KEY IMPACT METRICS

- 80% reduction in complaint-filing steps via one-click complaint system (PayNearby)
- 40% reduction in open support tickets via automated complaint auto-closure
- 10 MB APK size reduction by eliminating hardcoded multilingual language packs
- 200 to 400 new retailer onboardings per month from Referral and Rewards feature
- 80 to 90% bug-free delivery maintained consistently across all production releases
- 1 to 6 lakh app installs on 100MB - Sachin Tendulkar fan engagement app

---

EDUCATION

Master of Computer Applications (MCA) 2015
Thakur Institute of Management Studies, Mumbai University | CGPA: 7.6 / 10

Bachelor of Science in Information Technology (B.Sc. IT) 2012
Valia College, Mumbai University | 60%
